

AirXchanger

Air Transfer

The AirXchanger is ideal for use as a means of transferring either warm or cool air from one room to another in your home, thus increasing the effectiveness of existing heating or cooling systems. The AirXchanger incorporates a powerful in-line motor that can move 325m³/h of air.

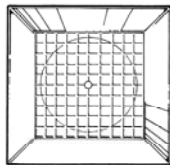

Moisture Extraction

In addition the AirXchanger is also very effective for the removal of moisture or steam laden air from bathrooms. It allows the direct expulsion of this air to the atmosphere, eliminating steam build up in the roof space that can occur with traditional bathroom extraction fans.

Air Master 150

Specially designed diffuser grille suitable for easy installation in gyprock ceilings and fibreboard eaves.

Designed to minimise pressure losses and to facilitate easy cleaning.

A Complete Kit

AirXchanger kit includes:-

- 1x High Performance in-line fan, suitable for high moisture environments.
- 2x Edmonds Air Master 150 ceiling grilles, with removable face grille for cleaning.
- 1x 6m Ducting
- 1x Roll Duct Tape
